

Year 9 to 11 Students:

Starting Your Journey to Tertiary Study

Research Prerequisites

Use the **VCE prerequisite explorer** filter on CourseSearch as a tool to help you plan ahead by identifying the prerequisites required for your desired course.

Plan Your Study Journey

Our **Fact Sheets and Guides** are a great resource to help you plan your own journey to tertiary study.

It is your decision how your study path looks. Our resources can assist you in understanding the process and making choices for your future.

Equity Schemes & Scholarships

If your education has been affected by difficult circumstances, **equity schemes and scholarships** are designed to help support you in achieving your study goals. They can make your course application more competitive and provide you with financial support.

Choosing Your Studies

When deciding what to study, we recommend thinking carefully about your interests, what you're good at and which studies will help you reach your goals.

Consider your strengths and weaknesses and talk to other people about their experiences. You can also visit open days to learn more about different institutions.

Tertiary Study

Tertiary study is any study that you complete after high school, including going to uni, TAFE, or another educational institution. It allows you to gain a qualification that will lead you towards a specific job or career area.

Remember:

There are many different pathways and options for study after high school, and everyone has their own road towards their dream career.

Entry Requirements & Prerequisites

Some courses have specific requirements you need to meet to be eligible for entry into a course.

VTAC's CourseSearch allows you to view these requirements, including prerequisite studies that you may need to complete in high school, so it's always helpful to start thinking about these early.
